<b>Current role</b>	Senior Software Engineer at Ludotech
<b>Experience</b>	Marketing, Market research, Data Analysis
<b>Technologies</b>	Docker, TypeScript, GCP, JavaScript, Python, Go, Node.js, Pulumi, Kubernetes, Java, Postgres, Spring, Svelte, React, AWS, DigitalOcean, Angular 8+, GraphQL

## Work experience

### Senior Software Engineer, Ludotech

Jun 2024 - Present (1y 3m)

Fast-paced startup targeting early-stage companies  
Marketing · Market research · Data Analysis

Docker    TypeScript    GCP    JavaScript    Python    Go    Node.js    Pulumi

- Developed competitive intelligence tool for real-time brand visibility analysis across search engines and LLMs
- Collaborated across teams to integrate APIs, LLM outputs, and search engine data into actionable client dashboard
- Designed automated workflows for collecting and visualizing ranking data from various platforms
- Enhanced product speed by 33% by migrating the core processing logic to Golang

### Lead Developer, Netcetera

Aug 2023 - May 2024 (9m)

Docker    Kubernetes    TypeScript    Java    Go    Postgres    Spring    Svelte

- Leading a development team for building and maintaining an internal system for generically displaying data stored in Postgres DB.

### Developer / Tech Lead, Netcetera

Jan 2022 - Jul 2023 (1y 6m)

React    AWS    Docker    Kubernetes    JavaScript    Node.js    DigitalOcean

- Successfully migrated client-specific digital publishing solution to SaaS, managing 700,000 monthly requests.
- Developed detailed documentation to guide future implementations effectively.

### Tech Lead, Netcetera

Jan 2020 - Dec 2021 (1y 11m)

TypeScript    JavaScript    Java    Spring    Angular 8+

- Led team to develop unified UI design system for four hospital applications, improving user experience.
- Created and maintained common libraries for third-party service integration and standardized authentication process.
- Managed requirements, estimations, reviews, and offered coaching.

TypeScript    JavaScript    GraphQL    Java    Spring    Angular 8+

- Developed and supported a sophisticated system for overseeing rail operations in 15 European countries.
- Utilized Java, Spring, TypeScript, Angular, GraphQL, and NgRx in the development process.

## Education

### Faculty of Computer Science and Engineering - Skopje, North Macedonia

Sep 2018 - Present (7y)

(8.5) Bachelor of Computer Science and Engineering

## Snippets

### Data Grid [github.com](#)

One of the core contributions of an open-source grid based on Angular with more than 7000 downloads

### Dependency Management Metrics Plugin [github.com](#)

Open-source maven plugin that calculates the Dependency Management Metrics for Java-based projects

### kNN MPI [github.com](#)

Parallel implementation of kNN using MPI

### Terminal Stormlight Archive [github.com](#)

Open-source initiative, bringing the epic world of Brandon Sanderson's Stormlight Archive series into your terminal

### Coffee Shop [github.com](#)

Simple coffee-ordering application, designed as a monorepo with the help of Yarn workspaces to showcase the usages of: Node.js, Express, CJS, ESM, TypeScript, React, GraphQL, Docker, PostgreSQL

### E-Shop [github.com](#)

Implemented a rating functionality on an open-source Spring application based on the microservices architecture with Spring Cloud

## More about me

### Interests

Sports, hiking, concerts, movies, pubs
