Ignatij Gichevski

Senior Backend Engineer

Skopje, North Macedonia ignatij.gichevski@gmail.com ignatij.github.io LinkedIn GitHub

SUMMARY

Senior Backend Engineer with 10+ years of experience across two employers: Netcetera (October 2016–May 2024) and Ludotech (June 2024–present). Delivered multiple client projects within each company, owning backend systems, reliable financial workflows, and performance-sensitive services. Hands-on across Node.js, TypeScript, Go, and cloud infrastructure, with technical leadership experience.

PROFESSIONAL EXPERIENCE

Employer: Ludotech

Employed June 2024–present

Senior Software Engineer → Team Lead

Selected projects delivered during this employment

Project: Quarzo Life

- Architected TypeScript/Deno services around domain and hexagonal boundaries for the customer, investment, and insurance lifecycle.
- Built reliable RabbitMQ workflows with transactional outbox/inbox patterns, idempotent consumers, and traceable message context.
- Defined PostgreSQL transaction boundaries, Zitadel identity and authorization, envelope encryption, and reproducible environments.

Technology: TypeScript, Deno, PostgreSQL, RabbitMQ, Redis / Valkey, Docker, Hono, Zod, OpenAPI, Zitadel, OpenTofu, Ansible, Proxmox

Project: Share of Search / Model

- Led development of a competitive-intelligence product covering search engines and LLM platforms.
- Designed automated collection workflows and worked with data science on LLM integrations.

Technology: Python, FastAPI, PostgreSQL, Prefect, Google ADK, React, Docker, Kubernetes

Project: J+ Monitor

- Reduced message-processing time by 33% by migrating a core processing service from Node.js to Go.

Technology: Node.js, React, Go, GCP, Docker, Pulumi, K8s, Google Pub/Sub, PostgreSQL

Employer: Netcetera

Employed October 2016–May 2024

Software Engineer → Senior Software Engineer → Technical Coordinator

Selected projects delivered during this employment

Project: W12 ERP System

- Led development and maintenance of an internal ERP system, acting as the main contact for requirements and delivery.
- Worked hands-on with Go, Java, PostgreSQL, Svelte, CI/CD, and Kubernetes.
- Supported financial reporting workflows that produced system-derived monthly statements within 1–5 days after month-end.

Technology: Java, Go, PostgreSQL, Svelte, Kubernetes, Microservices

Project: Forward Publishing

- Contributed to the migration of a client-specific publishing solution into a SaaS platform.
- Worked across Node.js services, PostgreSQL, React, CMS integrations, and Kubernetes infrastructure; the platform handled about 700,000 monthly requests.
- Documented the platform to support subsequent implementation work.

Technology: Node.js, React, NX, Livingdocs CMS, PostgreSQL, Docker, Kubernetes, Digital Ocean, AWS, Terraform, Cloudflare

Project: USB

- Led work to unify four hospital applications through a shared Angular/PrimeNG component library.
- Built reusable Java libraries for authentication, authorization, and third-party service integration.

Technology: TypeScript, JavaScript, Angular, PrimeNG, Java, Spring

Project: RNE — Rail Network Europe

- Developed and supported Java/Spring and TypeScript/Angular features for rail operations across 15 European countries.
- Worked on GraphQL APIs, NgRx state management, and multi-country time and scheduling concerns.

Technology: Java, Spring, TypeScript, Angular, GraphQL, NgRx

SELECTED OPEN-SOURCE PROJECTS

GoFlow GitHub ↗

- Built a Go workflow library with dependency resolution, retries, timeouts, parallel execution, and PostgreSQL persistence.

Technology: Go, PostgreSQL, Docker

SpotPilot GitHub ↗

- Built an agent-first Go CLI with deterministic commands, JSON-first output, local-device-aware Spotify playback, and browser-based authentication recovery.

Technology: Go, Cobra, Spotify, Chrome DevTools Protocol

Folio GitHub ↗

- Active contributor to Folio, an open-source, self-hosted CMS with a Go API, React admin interface, and static-site publishing.
- Host and maintain multiple Folio websites on my custom VPS.

Technology: Go, SQLite, TypeScript / React, Eleventy

Dependency Management Metrics Maven Plugin GitHub ↗

- Created a Maven plugin that calculates dependency-management metrics for multi-module Java projects and can enforce architecture thresholds.

Technology: Java, Maven

FOCUSED SKILLS

Backend	Node.js, TypeScript, Deno, Go, Python, Java, REST, OpenAPI
Data & messaging	PostgreSQL, RabbitMQ, Redis/Valkey, Google Pub/Sub, Amazon SQS
Reliability & architecture	Domain-Driven Design, Hexagonal Architecture, event-driven systems, transactional outbox/inbox, idempotency
Cloud & delivery	Docker, Kubernetes, GCP, AWS, OpenTofu, Terraform, Pulumi, Ansible, Proxmox
Supporting breadth	React, Svelte, Angular, GraphQL, OAuth/OIDC, Zitadel, Keycloak

EDUCATION

Faculty of Computer Science and Engineering, Skopje

Bachelor of Computer Science and Engineering (8.5)
September 2013–November 2018
